DETAILED ACTION

Drawings

The drawings are objected to because the planes upon which sectional views figures 2, 10 and 15 are taken should be indicated on the view from which the section is cut by a broken line, the ends of the broken line designated by Arabic or Roman numerals corresponding to the view number of the sectional view. See 37 CFR 1.84(h)(3). The drawings are also objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference character(s) not mentioned in the description: 190. Furthermore, figure 6 should be designated by a legend such as -- Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filling date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner,

Application/Control Number: 10/516,581

Art Unit: 3746

the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claims 1-18 are objected to because of the following informalities: It is not understood by the Office what is entailed by the term "four-in pump", as the term is neither commonly used in the art nor is it adequately described in the specification.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 5, 6, 10, 11, and 13-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Na, Korean Publication No. 95-33000.

Na discloses a pump comprising a gearing means 16, 17 connected to the drive shaft 1 of a motor, two eccentric shafts 14, 15 mounted on the gearing means and connected to pistons 3, 4 arranged in a cylinder block (see figs. 1 and 2), the shafts fit in their respective gears and fixed by a key and bolts (see fig. 7), the shafts fitting into a bearing mounted in a bearing housing within the piston housing (see fig. 7), the inner peripheral surface of the piston housing and the outer peripheral surface of the bearing housing being of elliptical shape and forming a gap there between (see fig. 7), the construction and operation of the upper and lower pistons being the same (see figs. 1

Application/Control Number: 10/516,581

Art Unit: 3746

and 2), the eccentric pistons being placed on tapered parts 12, 13 of the shafts along the same rotational axis, the pistons displacing with respect to the rotational central axis lines of the shafts, which clearly can be arbitrarily set.

In regards to the claimed limitations that there are four eccentric shafts and four pistons and two cylinder blocks, this constitutes a mere duplication of the parts disclosed by Na and has no patentable significance because a new and unexpected result is not produced. See MPEP §2144.04(6)(b).

Allowable Subject Matter

Claims 2-4, 7-9 and 12 would be allowable if rewritten to include all of the limitations of the base claims and any intervening claims.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick Hamo whose telephone number is 571-272-3492. The examiner can normally be reached on M-F 8:30-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ehud Gartenberg can be reached on 571-272-4828. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
